1 Challenge

Without any doubt, the people in our lives have the greatest influence on our happiness. We'd certainly have fewer problems and be happier if we were surrounded by like-minded folks who share our desires and opinions. However, in today's fast-paced society, we don't have the time and required resources to connect with people and find those who have similar aspirations and viewpoints.

As a matter of fact, the COVID-19 crisis and its inherent restrictions forcefully made us reevaluate every aspect of our lives and crippled what mattered most to us – our relationships – in the process. Consequently, this led to loneliness and depression for many.

Apparently, there is a plethora of social, matchmaking, and dating apps. However, many bots, basic algorithm results, privacy concerns, costly subscriptions, many adverts, and other underlying factors make it very difficult for most users to form new friendships and relationships. Interestingly, most individuals attempt to use multiple platforms. However, practically all these platforms share the same outdated functionalities and annoying algorithms. They only have different names and brands. Most of these platforms place a premium on suggestion results over quality, causing users to waste a lot of time and money.

Thankfully, blockchain and smart contract technology have made it easier and more convenient for regular people with ideas or talent to get supported by others. It has also opened the door for regular people to invest in projects they believe in without having to pay commissions to third parties such as banks, brokers, agencies, or financial institutions. The benefits are endless with the advent of blockchain technology.

Furthermore, we believe that every coin/token should have a purpose (utility) and that their usage should generate revenue for their respective projects. As such, the profits generated should be shared with the investors and holders who made it possible.

Unfortunately, the crypto space is now riddled with lots of scams and meme coins/tokens that have no use case, long-term goal, or income methods. As a result, an investor's profit depends on the next investor and the next investor depends on the next investor, and so on. When people eventually start selling, the last ones who bought are at the risk of losing, as they have to hope

that many more people will buy in order to make a profit or at the very least recover their investment. Sadly, most of these tokens don't even last a month, resulting in a loss of investment for many people while only a few make a profit. Thus, everyone is dependent on constant price hikes, which is absolutely unrealistic.

This is exactly where Bonddo steps in!

What we seek to achieve is unlike any other project out there. We aim to make socializing faster, more comfortable, and more promising by building social platform(s) that will bring everyone happiness and joy without prejudice, classification, or discrimination. We are not just creating another community in the crypto space. Rather, we're creating one that provides and ultimately receives value.

Then take a journey through our Bonddo project!

2 Our Mission

We aim to make socializing faster, more comfortable, and more promising by building social platform(s) that will bring everyone happiness and joy without prejudice, classification, or discrimination.

The Bonddo team will carefully develop a social platform(s) to satisfy everyone's needs. Our goal is to assist everyone in finding like-minded people, regardless of their location, origin, ethnicity, gender, age, religious belief, disability, or sexual orientation. The core functionalities of the Bonddo platform will always be free, allowing everyone to find new and excellent relationships. Moreover, while everyone is forming new connections, Bonddo will make it a point of duty to secure everyone's data from any 3rd party access.

Furthermore, we aim to set a positive example in the crypto ecosystem by encouraging more developers to create real utility projects that will benefit everyone, providing sufficient revenue to investors, founders, and employees. As a result, many new initiatives and businesses would be created. Consequently, those businesses and projects will create more job openings, remove market monopolies, and allow everyone to invest and get a share of the revenue generated.

The Interesting Part!

Now, this is where it gets more interesting! We've designed a solid strategy to benefit Bonddo token holders without the need for them to anticipate a constant increase in price or if it will even rise at all.

Once our social platform is launched and the company starts making a profit, every Bonddo token holder will get monthly passive income from the company's net profit. We seek to attract a large number of small investors rather than a few big ones so that this passive income can benefit as many individuals as possible and help them lead better lives.

3 Tokenomics and Blockchain Technology

Bonddo token will be launched on the BSC (Binance Smart Chain, BEP-20) network, and you may be nudged to ask why.

3.1 Why Binance Smart Chain?

The Binance Smart Chain has undoubtedly established itself as a major blockchain network. It is compatible with the Ethereum Virtual Machine (EVM) and enables smart contracts, resulting in a powerful decentralized finance ecosystem (DeFi). The dual-chain framework of BSC enables the development of decentralized apps and digital assets on a single blockchain.

Furthermore, it provides quick blockchain transaction times and a very affordable fee structure. More so, the BSC network has a large user base that provides sufficient support for new initiatives, making it an excellent choice for our Bonddo project.

3.2 Bonddo Tokenomics

Symbol: **BONDO**

Total supply: 800,000,000 (800 million)

Decimals: 9

Address: 0x8de73526F9E485eb50Ef8A615ce4086D724a0e56

Launchpad: Pinksale (pinksale.finance)

Decentralized Exchange (DEX): PancakeSwap (pancakeswap.finance)

<https://pancakeswap.finance/swap/0x8de73526F9E485eb50Ef8A615ce4086D724a0e56>

3.3 Bonddo Token Allocation

- 50% of the total supply will be allocated for presale, which will be done on pinksale.finance launchpad. There won't be vesting for presale tokens.
- 30% of the total supply will be added to the PancakeSwap liquidity pool. As soon as liquidity is added to the pool, LP tokens will be locked for 100 years.
- 10% is reserved for future partnerships and/or development. Tokens will be locked entirely for six months.
- 9% is allocated to the team, which will be locked with a vesting period of 6 months. Each month, 1.5% will be released and divided equally among every member. The first release will happen a month after launching on PancakeSwap.
- 1% will be distributed as an airdrop to randomly selected applicants 12-48 hours after launching on PancakeSwap.

3.4 Tax Distribution

- Total taxes will be 10% without the possibility to change
- A 3% marketing tax will ensure that we have steady marketing income for the utility launch and the promotion of BONDO token prior to its release.
- A 3% development tax will build a reserve for developing our first social platform. We will use all excess money for marketing.
- 1% liquidity tax will automatically increase liquidity and burn LP tokens
- 3% rewards tax will ensure that holders get passive income before our first utility is released. Reflections will be sent automatically every 12 hours in BUSD to users Binance Smart Chain wallet, where they hold their BONDO tokens.

4 Road Map

We established a detailed and comprehensive plan for the first year. We still have a lot in the pipeline for this year and the next. However, we intend to be absolute and upfront by not overpromising and underdelivering. Since the first year will be the most difficult, especially with the legal aspects of the company and the development of the initial project, we do not want to create a very long roadmap that may result in us not delivering some of our promises.

We have a staunch resolve to follow the roadmap that we have laid out for you. Certain items may go slower than others. However, rest assured that we'd keep our word and deliver on our promises.

For example, platform development and forming a company are things that may happen at a faster or slower pace than we planned. As a matter of fact, they are things that can't be rushed, as they may cause a slew of problems for investors, founders, and users in the long run. As previously mentioned, we intend to develop a number of long-term projects as a utility for the BONDO token. Thus, our responsibility and commitment to our investors and users is to guarantee that everything runs smoothly and efficiently.

4.1 Q2 2022 (Launching Phase)

- We will be focusing on the presale and launching of the BONDDO token.
- The airdrop campaign is set to take place on the beginning of May.
- The presale is set to take place between the end of May and the middle of June.
- Launching on PancakeSwap will happen within 24 hours after the presale is filled.
- Locking team tokens with 6 months vesting, locking partnership/development tokens.
- Pinksale will automatically lock liquidity. As soon as the BONDO token is launched, the development of the social platform will start, and we will raise awareness about the token through various marketing and holder rewarding campaigns. We'll also add multiple languages to our website.

4.2 Q3 2022 (Promotion Phase)

- We'd commence legal procedures for the incorporation of our company to protect its digital property and branding.
- As the beta version of the social platform nears completion, we'd commence the development of a smart contract for profit distribution.
- Once the contract is created, we will request a Certik audit of the contract to ensure that users' deposits to the staking pool and dividend payouts are secure and work flawlessly.
- By the end of September, the beta version of the social platform should be available and released for short time testing.
- We will conduct extensive testing prior to releasing the beta version. Nevertheless, a 10–15-day testing period following the beta version's release will guarantee that everything works fine, and if any issues arise, we can fix them before the full release.
- If the company's incorporation and trademarking property aren't completed, the beta version's release will be deferred until the legal procedure is completed. (Launching it before the completion of all legal processes can result in a slew of issues).
- Once the beta version is released, we will start preparing a massive platform and BONDDO token campaign to raise awareness about the social platform and our mission.

4.3 Q4 2022 (Utility Phase)

- We will create a staking pool where holders can transfer their BONDDO tokens and steadily prepare for revenue distribution after the Certik audit is done and the contract is confirmed to be 100% safe.
- We will remove all taxes from buying and selling before launching a fully-functional version of the social platform, as the social platform and staking pool will take care of them.
- We will renounce ownership of the contract after removing taxes because there will be no need for any other adjustments, and this will provide improved security and complete decentralization of the BONDDO token.

- We will continue marketing activities for the social platform and BONDO token branding as soon as a fully working social network is deployed. The first revenue-based dividends will be paid 30-45 days after the release of a fully functional social platform, with the exact date for continuous payouts to be determined. Then, on the same day each month, we'll distribute rewards to each holder who meets the requirements (which will be explained better in the “staking and profit distribution” section).
- We'll keep working on the platform, introducing new features, fixing bugs as they arise, and listening to user and community feedback in order to improve and optimize the user experience.

4.4 Q1 2023 (Expansion Phase)

- Everything should be up and running in the first quarter of 2023, so we'll concentrate on expanding the adoption of the BONDDO token by forming partnerships with other organizations and/or individuals to accept BONDDO as a payment option for their products and services.
- We will continue to grow the social platform by adding more languages and user support for each language.
- As there won't be much for the developers to work on the first social platform, we will start planning and developing another utility that will be announced just before we begin.
- By the end of January 2023, we will release more updates on the second utility project and roadmap for 2023.

5 Staking and Profit Distribution

We aim to generate revenue from three different sources:

1. BONDO token payments
2. Traditional payments
3. Income from Ads

After deducting operational expenses and taxes, the smart contract will distribute profits to the staking pool, which Certik will audit for security.

5.1 How Does Staking Work?

Once the taxes on purchasing and selling are removed, we will create a staking pool. Profits will be distributed through a smart contract based on the pool's percentage of staked BONDO tokens.

Consider the following scenario: suppose the staking pool has 400 million BONDO tokens staked in it, and you own 4 million tokens in the pool. In that case, you will receive 1% of the overall BUSD payout. As more individuals stake, the percentage will decrease; as fewer people stake, the rate will increase.

It is noteworthy that we won't completely lock staked tokens. We understand that unforeseen events can happen to anyone at any time. Consequently, users will be able to "unstake" at any time they wish. The profits will be distributed on a particular date every month, which will be determined after the first payout.

Certain requirements must be met in order to be eligible for profit distribution. These requirements include:

1. The same amount of BONDDO tokens must be staked for the whole month. After each distribution, the depositing option will be opened for 48-72 hours. However, once depositing is closed, users will be unable to deposit more until the next profit distribution. It is vital to note that you'll be able to "unstake" your tokens at any time, and you can only "unstake" them as a whole. However, you won't be eligible for that month's profit distribution, even if you "unstaked" an hour before issuance.

2. Your staked BONDDO tokens must be worth at least 0.001% of the total supply. We set a minimum stake amount to avoid overspending on transaction costs and to make distribution more manageable and sustainable.
3. It's not confirmed at this time, but it's worth mentioning because new crypto regulations emerge every day. Depending on the rules and regulations guiding the country our company is incorporated, users may be required to authenticate their identity (KYC) for the redistribution of profit. We are checking multiple locations for incorporation. However, when deciding on a place for incorporation, we analyze a variety of factors such as security, legislation, taxes, and so on. Thus, we must abide by the rules of our choice location.

5.2 Bonddo Token Payments

All our projects use the BONDDO token as their exclusive cryptocurrency. We anticipate that the BONDDO token will be adopted as a preferred payment method due to many promotions and large savings on project payment plans.

When a payment plan is paid with the BONDDO token, the smart contract will automatically exchange it for BUSD and keep it in the contract until profit is distributed. We ensure that the liquidity pool is healthy by converting BONDDO to BUSD and preserving the same amount of stable currency that was paid for utility. We are not reliant on the current token price in this scenario.

However, there may or may not be a tax on token payments as a result of the different cryptocurrency laws guiding various countries. We'd keep all token payments in the contract until distribution day and pay taxes and operational expenses with revenue from traditional payments and ads, thereby avoiding taxes on BUSD purchases for distribution.

5.3 Traditional Payments

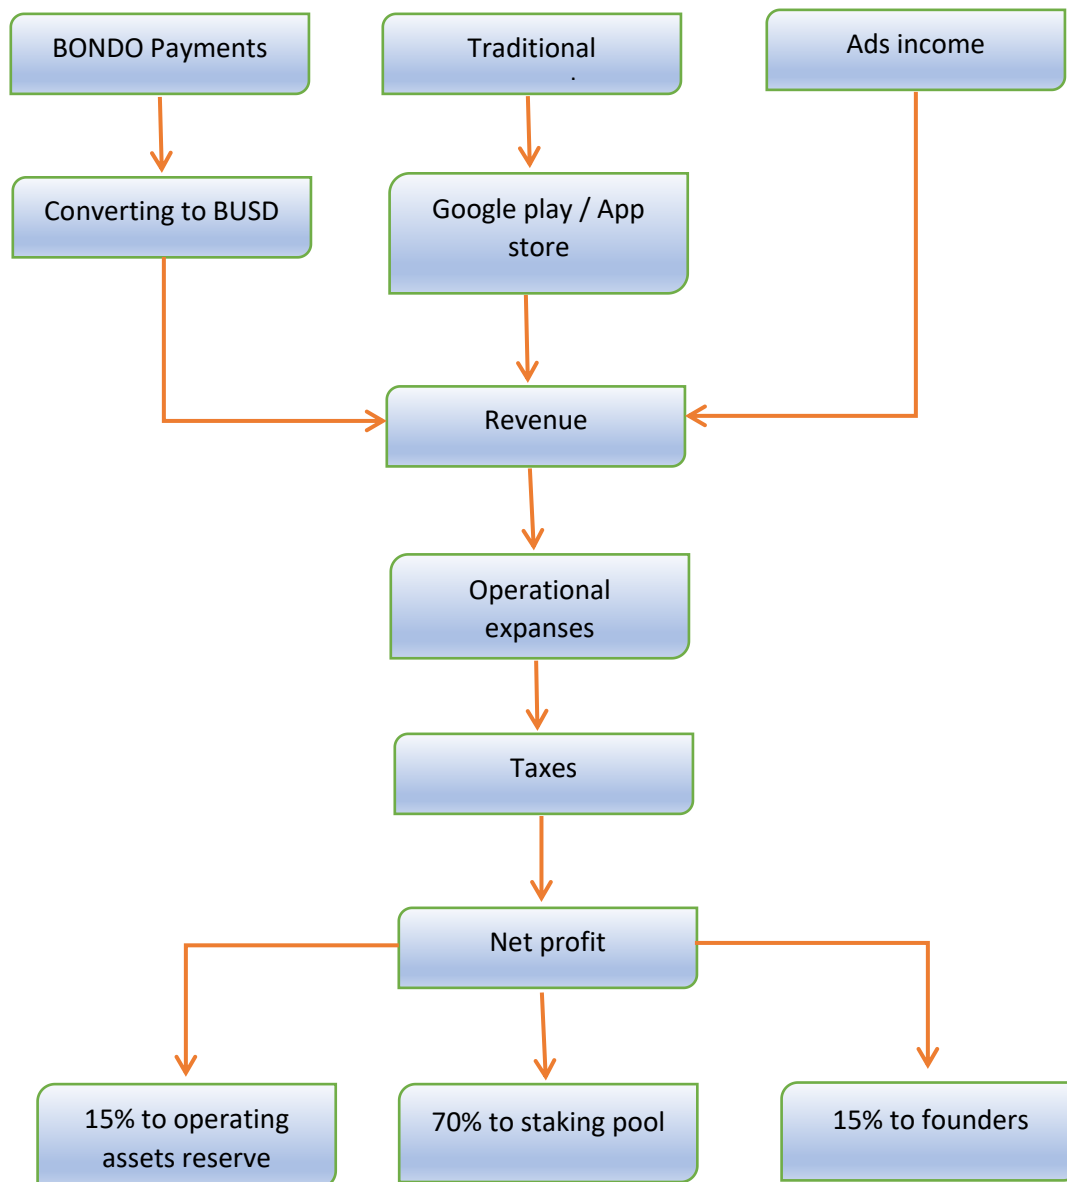

Traditional payment methods are still widely used by everyone. In a bid to allow everyone, including non-crypto enthusiasts, to use our platforms, we will implement traditional payment options, such as card payments and local and global payment processors.

Adding traditional payment options will increase usage. However, it will also come with lots of regulations and taxes. Therefore, in-app purchases will be 70-100% higher, so the company's profit per purchase via traditional payment options is equal to BONDO token purchases. However, higher prices for traditional payments might lead to more purchases with the BONDO token. It's a win-win scenario.

5.4 Income From Ads

Our social platform will be available for free use for everyone. As is the case with most platforms, the free option will include a basic usage model and advertisements with no additional functionalities and/or restrictions. We will go with a few ads daily for free users, so they do not get upset by spending too much time on ads. Those ads will bring some revenue, which will be distributed to the staking pool together with income from traditional purchases and BODO token payments.

5.5 Profit Distribution Schema

6 Security

When it comes to security, the crypto space is confronted with a number of issues. The inherent worth of a currency increases as more entities employ secure transaction models. Otherwise, the underlying risk remains, and wallets could be hacked on a large scale.

Not only are markets impacted by hacks and frauds, we also understand that consumer demand for a digital asset depreciates when security breaches occur. As a result, transparency to investors and the safety of their funds are our top priorities. We have developed a contract that can't be manipulated to ensure that investments are safe, and we are confident that our contract is one of the most secure out there.

6.1 Anti “rug pull”

Once liquidity is added to PancakeSwap, all cake-LP tokens will automatically be locked for 100 years by the Pinksale launchpad. Also, all the cake-LP tokens obtained from auto liquidity tax will be burned automatically.

6.2 Anti “Dump”

As already described in token allocation, we won't hold any tokens except those allocated to the team and partnerships, which will be locked before liquidity is added on PancakeSwap.

Moreover, we will provide a link to locked tokens so users can check them out. The total token supply is also 800,000,000, without the possibility to mint more.

6.3 Anti “honeypot”

Thanks to safeguards in the code, we ensured that taxes cannot exceed 10% and that taxes cannot be manipulated. We have implemented a one-time mechanism to disable all taxes that will be triggered upon the social platform's full release.

7 Disclaimer

Please read this content carefully before participating in the BONDDO token sale.

We've been working on this project for a long time, and we're excited to share our whitepaper with you, which includes the team's objective, BONDDO token tokenomics, road map, profit distribution, and the technical security of the BONDDO token smart contract.

This whitepaper is descriptive and not legally binding, and it is created to provide information on the BONDDO project we intend to launch. As a result, nothing in this whitepaper should be interpreted as an invitation or an incentive to attract participation in any investment.

You will not own any company shares or a position in the company if you invest in the BONDO token. You can use your purchased BONDO tokens as a means of payment on our social platforms or to make a deposit to the staking pool. Once everything is ready for net profit distribution, we will set up a staking pool, which we will run as long as

1. The company is profitable and
2. The laws and regulations allow it

As the BONDDO project is in its starting phase, laws and regulations change often, and the cryptocurrency space is volatile – certain events and occurrences are beyond our control. Thus, we won't be held liable for events that are beyond our control. However, we'd endeavor to clarify what and what not you can hold us responsible for.

Our Responsibility is to:

1. Ensure that users receive the correct number of tokens from the presale.
2. Maintain the current tax rate of 10% until taxes are abolished. As previously mentioned, the smart contract was created with this in mind, and there is no way to adjust taxes other than completely disabling them.
3. Lock LP tokens for at least 100 years. Which will be automatically done after presale by Pinksale.finance.

4. Share a portion of the company's net profit once the company starts making a profit, as long as the law allows it. To be clear, net profit is the money left after all operational expenses and taxes are deducted. We reserve the right to modify distribution percentages only for the sole purpose of company improvement. **NB: The team percentage will not exceed 15%.**
5. Ensure that users can always buy and sell tokens by keeping trading open. We reserve the right to close trading for a maximum of 14 days in case of:

- **Concerns about the contract's security**

Suppose we have any concerns about the security or functionality of the contract. In that case, we reserve the right to close trading for up to 14 days until the new contract is developed and deployed.

- **Migrating to a new version of the contract**

As you already know, contracts on the blockchain cannot be updated and changed. Therefore, if we need more functionalities in the BONDDO token contract than the social platform or staking pool will need, we reserve the right to close trading for a maximum of 7 days. And we are obliged to notify users at least 72 hours before migration. It is unlikely to migrate to another version of the BONDDO token, but we do not exclude it as a possibility.

We are not liable for:

1. BONDO token price. The cryptocurrency market is highly volatile. Consequently, we are not liable for an unexpected rise or fall in the price of the BONDDO token.
2. Blockchain technology malfunction, downtime, breaches, and transaction fees
3. PancakeSwap's malfunction, downtime, breach, and transaction fees
4. If you lose your tokens by sending them to a wrong address, or if your seed phrase/private key is lost or stolen, or in any other circumstance. We will never ask you to send us your BONDDO or any other tokens/coins. Neither would we ask for your wallet's secret phrase or private key. In the case of migration to a new version of the contract, you will be able to exchange old coins for new ones on our website – www.bonddo.io.

5. Laws and Regulations.

Any laws and regulations that are directly or indirectly imposed on the corporation by any country must be followed. Suppose there are any laws or regulations that require us to limit or halt activities in any country or with any individual. In that case, we must comply for the company's success and sustainability.
